Standard Operating Procedures (SOP) Manual

Sample step-by-step procedures for common operational workflows

Document ID: SOP
Version: 1.0
Status: Fictional sample for RAG testing
Intended use: PDF loading, chunking, retrieval, and exact page citations

Important notice
This document is entirely fictional. It contains no official company policy, legal advice, or operational authorization. Names, roles, thresholds, and examples are illustrative. Use it only as a sample knowledge base for software development and testing.

How to use this document
Ask the RAG assistant questions about the content in this PDF. Expected answers should cite the filename and exact page containing the supporting information. Some topics intentionally overlap across documents so source attribution can be tested.

01. SOP framework and document control

Explains the structure and control requirements used for standard operating procedures.

Purpose — Each SOP defines one repeatable task and the expected outcome.

Ownership — A process owner is accountable for accuracy, review, and approval.

Control — Users must verify they are following the current approved version.

Practical example
Before performing a task, an operator checks the SOP title, version, and effective date.

Records and evidence
Keep approval records, revision history, owner details, and distribution locations.

This fictional SOP collection is for software-based RAG testing and does not authorize real operations.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

02. SOP framework and document control: decision points and common issues

Additional guidance for applying this topic consistently, including checks, exceptions, and evidence.

Before you begin — Confirm the situation is within scope, identify the responsible owner, and consult the current approved source.

Decision point — Use documented facts and the relevant approval path; if unclear, pause and ask the designated owner rather than guessing.

Common issue — Missing context, outdated records, or unclear ownership can lead to inconsistent outcomes. Resolve these gaps before completion.

Practical example
In a review of sop framework and document control, the team finds inconsistent handling. The owner compares records with approved requirements, documents the gap, and assigns corrective action.

Records and evidence
Capture the decision rationale, supporting evidence, owner, date, and follow-up action related to sop framework and document control.

If this guidance conflicts with a current approved organizational document, follow the approved document and escalate the conflict to its owner.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

03. SOP: Receive and register a request

Defines the standard process for registering incoming work.

Step 1 — Open the approved intake channel and confirm that the request is within scope.

Step 2 — Capture requester, summary, impact, desired outcome, and supporting evidence.

Step 3 — Create a unique reference, acknowledge receipt, and route the request.

Practical example
A request arrives by the approved form; the operator checks mandatory fields before creating a record.

Records and evidence
Record the request ID, received time, submitted fields, and acknowledgement.

If required information is missing, request clarification instead of inventing details.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

04. SOP: Receive and register a request: decision points and common issues

Additional guidance for applying this topic consistently, including checks, exceptions, and evidence.

Before you begin — Confirm the situation is within scope, identify the responsible owner, and consult the current approved source.

Decision point — Use documented facts and the relevant approval path; if unclear, pause and ask the designated owner rather than guessing.

Common issue — Missing context, outdated records, or unclear ownership can lead to inconsistent outcomes. Resolve these gaps before completion.

Practical example
In a review of sop: receive and register a request, the team finds inconsistent handling. The owner compares records with approved requirements, documents the gap, and assigns corrective action.

Records and evidence
Capture the decision rationale, supporting evidence, owner, date, and follow-up action related to sop: receive and register a request.

If this guidance conflicts with a current approved organizational document, follow the approved document and escalate the conflict to its owner.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

05. SOP: Validate request completeness

Provides a repeatable check before work is assigned.

Step 1 — Compare the request with the mandatory-field checklist.

Step 2 — Check that attachments open and correspond to the request.

Step 3 — Return incomplete requests with a specific list of missing information.

Practical example
A request lacks a business impact statement, so the operator returns it for clarification.

Records and evidence
Keep validation outcome, missing-field notes, and requester response.

Do not reject a request solely because optional information is absent.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

06. SOP: Validate request completeness: decision points and common issues

Additional guidance for applying this topic consistently, including checks, exceptions, and evidence.

Before you begin — Confirm the situation is within scope, identify the responsible owner, and consult the current approved source.

Decision point — Use documented facts and the relevant approval path; if unclear, pause and ask the designated owner rather than guessing.

Common issue — Missing context, outdated records, or unclear ownership can lead to inconsistent outcomes. Resolve these gaps before completion.

Practical example
In a review of sop: validate request completeness, the team finds inconsistent handling. The owner compares records with approved requirements, documents the gap, and assigns corrective action.

Records and evidence
Capture the decision rationale, supporting evidence, owner, date, and follow-up action related to sop: validate request completeness.

If this guidance conflicts with a current approved organizational document, follow the approved document and escalate the conflict to its owner.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

07. SOP: Classify and prioritize work

Defines a consistent method for assigning work priority.

Step 1 — Assess the service or business impact using the approved matrix.

Step 2 — Assess urgency, time sensitivity, and available workaround.

Step 3 — Record the priority and rationale, then route to the appropriate queue.

Practical example
A service-wide interruption with no workaround receives a higher priority than a routine query.

Records and evidence
Keep impact evidence, priority rationale, classification, and any reassessment.

Use the organization's approved priority matrix; sample categories are not binding.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

08. SOP: Classify and prioritize work: decision points and common issues

Additional guidance for applying this topic consistently, including checks, exceptions, and evidence.

Before you begin — Confirm the situation is within scope, identify the responsible owner, and consult the current approved source.

Decision point — Use documented facts and the relevant approval path; if unclear, pause and ask the designated owner rather than guessing.

Common issue — Missing context, outdated records, or unclear ownership can lead to inconsistent outcomes. Resolve these gaps before completion.

Practical example
In a review of sop: classify and prioritize work, the team finds inconsistent handling. The owner compares records with approved requirements, documents the gap, and assigns corrective action.

Records and evidence
Capture the decision rationale, supporting evidence, owner, date, and follow-up action related to sop: classify and prioritize work.

If this guidance conflicts with a current approved organizational document, follow the approved document and escalate the conflict to its owner.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

09. SOP: Assign work to an operator

Describes how coordinators allocate work to qualified staff.

Step 1 — Confirm the task type, required skills, and authorization level.

Step 2 — Check capacity and existing workload.

Step 3 — Assign an owner and confirm acceptance or an alternative assignment.

Practical example
A restricted task is assigned only to an operator whose authorization is current.

Records and evidence
Record assignment time, assignee, skill check, and reassignment reason.

Do not assign work based only on availability when specialist authorization is required.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

10. SOP: Assign work to an operator: decision points and common issues

Additional guidance for applying this topic consistently, including checks, exceptions, and evidence.

Before you begin — Confirm the situation is within scope, identify the responsible owner, and consult the current approved source.

Decision point — Use documented facts and the relevant approval path; if unclear, pause and ask the designated owner rather than guessing.

Common issue — Missing context, outdated records, or unclear ownership can lead to inconsistent outcomes. Resolve these gaps before completion.

Practical example
In a review of sop: assign work to an operator, the team finds inconsistent handling. The owner compares records with approved requirements, documents the gap, and assigns corrective action.

Records and evidence
Capture the decision rationale, supporting evidence, owner, date, and follow-up action related to sop: assign work to an operator.

If this guidance conflicts with a current approved organizational document, follow the approved document and escalate the conflict to its owner.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

11. SOP: Perform a routine task

Provides a general execution sequence for approved low-risk tasks.

Step 1 — Read the request and confirm the intended result.

Step 2 — Check prerequisites and authorization.

Step 3 — Perform the documented action, verify the result, and record completion.

Practical example
An operator updates a non-sensitive record after confirming the request and verifying the saved value.

Records and evidence
Keep the request reference, checklist, verification result, and completion note.

Stop if the observed system state differs from the SOP assumptions.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

12. SOP: Perform a routine task: decision points and common issues

Additional guidance for applying this topic consistently, including checks, exceptions, and evidence.

Before you begin — Confirm the situation is within scope, identify the responsible owner, and consult the current approved source.

Decision point — Use documented facts and the relevant approval path; if unclear, pause and ask the designated owner rather than guessing.

Common issue — Missing context, outdated records, or unclear ownership can lead to inconsistent outcomes. Resolve these gaps before completion.

Practical example
In a review of sop: perform a routine task, the team finds inconsistent handling. The owner compares records with approved requirements, documents the gap, and assigns corrective action.

Records and evidence
Capture the decision rationale, supporting evidence, owner, date, and follow-up action related to sop: perform a routine task.

If this guidance conflicts with a current approved organizational document, follow the approved document and escalate the conflict to its owner.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

13. SOP: Verify completed work

Defines a quality check before a task is closed.

Step 1 — Compare the result with the acceptance criteria.

Step 2 — Check key fields, links, and related records.

Step 3 — Record pass or fail and return defects for correction.

Practical example
A reviewer confirms that the requested change appears in the correct record and is saved.

Records and evidence
Keep verification checklist, reviewer, result, and defect reference if applicable.

A task must not be marked complete when a required verification step fails.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

14. SOP: Verify completed work: decision points and common issues

Additional guidance for applying this topic consistently, including checks, exceptions, and evidence.

Before you begin — Confirm the situation is within scope, identify the responsible owner, and consult the current approved source.

Decision point — Use documented facts and the relevant approval path; if unclear, pause and ask the designated owner rather than guessing.

Common issue — Missing context, outdated records, or unclear ownership can lead to inconsistent outcomes. Resolve these gaps before completion.

Practical example
In a review of sop: verify completed work, the team finds inconsistent handling. The owner compares records with approved requirements, documents the gap, and assigns corrective action.

Records and evidence
Capture the decision rationale, supporting evidence, owner, date, and follow-up action related to sop: verify completed work.

If this guidance conflicts with a current approved organizational document, follow the approved document and escalate the conflict to its owner.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

15. SOP: Request peer review

Explains how to obtain a second-person review for designated work.

Step 1 — Identify whether the task requires peer review under the risk rules.

Step 2 — Provide the reviewer with the request, evidence, and expected outcome.

Step 3 — Record approval or findings before release.

Practical example
A high-impact change waits for the independent reviewer's approval before completion.

Records and evidence
Keep reviewer identity, review timestamp, comments, and final decision.

The person performing the work must not record themselves as the independent reviewer.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

16. SOP: Request peer review: decision points and common issues

Additional guidance for applying this topic consistently, including checks, exceptions, and evidence.

Before you begin — Confirm the situation is within scope, identify the responsible owner, and consult the current approved source.

Decision point — Use documented facts and the relevant approval path; if unclear, pause and ask the designated owner rather than guessing.

Common issue — Missing context, outdated records, or unclear ownership can lead to inconsistent outcomes. Resolve these gaps before completion.

Practical example
In a review of sop: request peer review, the team finds inconsistent handling. The owner compares records with approved requirements, documents the gap, and assigns corrective action.

Records and evidence
Capture the decision rationale, supporting evidence, owner, date, and follow-up action related to sop: request peer review.

If this guidance conflicts with a current approved organizational document, follow the approved document and escalate the conflict to its owner.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

17. SOP: Communicate a progress update

Sets out how to send useful status information to a requester.

Step 1 — Confirm the latest verified status with the work owner.

Step 2 — Summarize completed actions, current blocker, and next step.

Step 3 — Provide the next update point without promising an unsupported resolution time.

Practical example
An operator tells the requester that investigation is ongoing and identifies when another update will be provided.

Records and evidence
Keep the update timestamp, channel, summary, and any commitment made.

Do not disclose internal restricted notes or unverified speculation.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

18. SOP: Communicate a progress update: decision points and common issues

Additional guidance for applying this topic consistently, including checks, exceptions, and evidence.

Before you begin — Confirm the situation is within scope, identify the responsible owner, and consult the current approved source.

Decision point — Use documented facts and the relevant approval path; if unclear, pause and ask the designated owner rather than guessing.

Common issue — Missing context, outdated records, or unclear ownership can lead to inconsistent outcomes. Resolve these gaps before completion.

Practical example
In a review of sop: communicate a progress update, the team finds inconsistent handling. The owner compares records with approved requirements, documents the gap, and assigns corrective action.

Records and evidence
Capture the decision rationale, supporting evidence, owner, date, and follow-up action related to sop: communicate a progress update.

If this guidance conflicts with a current approved organizational document, follow the approved document and escalate the conflict to its owner.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

19. SOP: Resolve and close a request

Defines closure requirements for completed work.

Step 1 — Confirm that the outcome meets the request or agreed alternative.

Step 2 — Write a concise resolution summary and link supporting evidence.

Step 3 — Set the approved closed status and notify the requester.

Practical example
A request is closed after the requester receives a clear summary and the completion check passes.

Records and evidence
Keep resolution details, evidence links, closure time, and notification record.

If the requester disputes the result, follow the reopen or review process.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

20. SOP: Resolve and close a request: decision points and common issues

Additional guidance for applying this topic consistently, including checks, exceptions, and evidence.

Before you begin — Confirm the situation is within scope, identify the responsible owner, and consult the current approved source.

Decision point — Use documented facts and the relevant approval path; if unclear, pause and ask the designated owner rather than guessing.

Common issue — Missing context, outdated records, or unclear ownership can lead to inconsistent outcomes. Resolve these gaps before completion.

Practical example
In a review of sop: resolve and close a request, the team finds inconsistent handling. The owner compares records with approved requirements, documents the gap, and assigns corrective action.

Records and evidence
Capture the decision rationale, supporting evidence, owner, date, and follow-up action related to sop: resolve and close a request.

If this guidance conflicts with a current approved organizational document, follow the approved document and escalate the conflict to its owner.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

21. SOP: Reopen a request

Explains when a completed request can be reopened.

Step 1 — Review the reason for the reopen request and the original outcome.

Step 2 — Determine whether the original acceptance criteria remain unmet.

Step 3 — Reopen with a linked reason and assign an owner for follow-up.

Practical example
A requester demonstrates that a required field was not updated, so the request is reopened.

Records and evidence
Keep the reopen reason, original request link, reassignment, and new outcome.

Do not create a duplicate request when the existing record should be reopened.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

22. SOP: Reopen a request: decision points and common issues

Additional guidance for applying this topic consistently, including checks, exceptions, and evidence.

Before you begin — Confirm the situation is within scope, identify the responsible owner, and consult the current approved source.

Decision point — Use documented facts and the relevant approval path; if unclear, pause and ask the designated owner rather than guessing.

Common issue — Missing context, outdated records, or unclear ownership can lead to inconsistent outcomes. Resolve these gaps before completion.

Practical example
In a review of sop: reopen a request, the team finds inconsistent handling. The owner compares records with approved requirements, documents the gap, and assigns corrective action.

Records and evidence
Capture the decision rationale, supporting evidence, owner, date, and follow-up action related to sop: reopen a request.

If this guidance conflicts with a current approved organizational document, follow the approved document and escalate the conflict to its owner.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

23. SOP: Escalate a blocked task

Defines how to escalate work that cannot progress within the operator's authority.

Step 1 — Describe the blocker and its impact using observed facts.

Step 2 — List checks and actions already completed.

Step 3 — Route to the correct specialist or lead and confirm next ownership.

Practical example
An operator cannot access an approved tool and escalates with the exact error and request reference.

Records and evidence
Keep escalation time, recipient, diagnostic details, and response.

Do not bypass access controls to force progress.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

24. SOP: Escalate a blocked task: decision points and common issues

Additional guidance for applying this topic consistently, including checks, exceptions, and evidence.

Before you begin — Confirm the situation is within scope, identify the responsible owner, and consult the current approved source.

Decision point — Use documented facts and the relevant approval path; if unclear, pause and ask the designated owner rather than guessing.

Common issue — Missing context, outdated records, or unclear ownership can lead to inconsistent outcomes. Resolve these gaps before completion.

Practical example
In a review of sop: escalate a blocked task, the team finds inconsistent handling. The owner compares records with approved requirements, documents the gap, and assigns corrective action.

Records and evidence
Capture the decision rationale, supporting evidence, owner, date, and follow-up action related to sop: escalate a blocked task.

If this guidance conflicts with a current approved organizational document, follow the approved document and escalate the conflict to its owner.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

25. SOP: Report a suspected security incident

Provides a safe reporting sequence for suspected security events.

Step 1 — Stop the risky action and avoid spreading suspicious content.

Step 2 — Use the approved incident reporting channel and provide observed facts.

Step 3 — Preserve evidence as directed and follow the incident lead's instructions.

Practical example
An employee receives a suspicious link, does not open or forward it, and reports it.

Records and evidence
Keep report reference, time observed, affected asset if known, and response instructions.

Do not investigate beyond your authorization or delete potential evidence.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

26. SOP: Report a suspected security incident: decision points and common issues

Additional guidance for applying this topic consistently, including checks, exceptions, and evidence.

Before you begin — Confirm the situation is within scope, identify the responsible owner, and consult the current approved source.

Decision point — Use documented facts and the relevant approval path; if unclear, pause and ask the designated owner rather than guessing.

Common issue — Missing context, outdated records, or unclear ownership can lead to inconsistent outcomes. Resolve these gaps before completion.

Practical example
In a review of sop: report a suspected security incident, the team finds inconsistent handling. The owner compares records with approved requirements, documents the gap, and assigns corrective action.

Records and evidence
Capture the decision rationale, supporting evidence, owner, date, and follow-up action related to sop: report a suspected security incident.

If this guidance conflicts with a current approved organizational document, follow the approved document and escalate the conflict to its owner.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

27. SOP: Report a privacy concern

Explains how to route suspected mishandling of personal information.

Step 1 — Record what was observed without copying unnecessary personal data.

Step 2 — Notify the designated privacy or incident contact promptly.

Step 3 — Follow instructions for containment, evidence, and communications.

Practical example
A document appears to have been shared with an unintended recipient and is reported promptly.

Records and evidence
Keep the report reference, data category, time, containment action, and assigned owner.

Do not independently notify affected individuals unless authorized to do so.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

28. SOP: Report a privacy concern: decision points and common issues

Additional guidance for applying this topic consistently, including checks, exceptions, and evidence.

Before you begin — Confirm the situation is within scope, identify the responsible owner, and consult the current approved source.

Decision point — Use documented facts and the relevant approval path; if unclear, pause and ask the designated owner rather than guessing.

Common issue — Missing context, outdated records, or unclear ownership can lead to inconsistent outcomes. Resolve these gaps before completion.

Practical example
In a review of sop: report a privacy concern, the team finds inconsistent handling. The owner compares records with approved requirements, documents the gap, and assigns corrective action.

Records and evidence
Capture the decision rationale, supporting evidence, owner, date, and follow-up action related to sop: report a privacy concern.

If this guidance conflicts with a current approved organizational document, follow the approved document and escalate the conflict to its owner.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

29. SOP: Handle a customer complaint

Provides a consistent process for acknowledging and investigating complaints.

Step 1 — Listen, acknowledge the concern, and capture the customer's description.

Step 2 — Check relevant records and gather facts from the responsible team.

Step 3 — Provide an approved response and record any corrective action.

Practical example
A customer reports repeated delays; the operator acknowledges the issue and routes it for review.

Records and evidence
Keep complaint reference, evidence, response, and corrective-action owner.

Avoid defensive language or promises that have not been approved.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

30. SOP: Handle a customer complaint: decision points and common issues

Additional guidance for applying this topic consistently, including checks, exceptions, and evidence.

Before you begin — Confirm the situation is within scope, identify the responsible owner, and consult the current approved source.

Decision point — Use documented facts and the relevant approval path; if unclear, pause and ask the designated owner rather than guessing.

Common issue — Missing context, outdated records, or unclear ownership can lead to inconsistent outcomes. Resolve these gaps before completion.

Practical example
In a review of sop: handle a customer complaint, the team finds inconsistent handling. The owner compares records with approved requirements, documents the gap, and assigns corrective action.

Records and evidence
Capture the decision rationale, supporting evidence, owner, date, and follow-up action related to sop: handle a customer complaint.

If this guidance conflicts with a current approved organizational document, follow the approved document and escalate the conflict to its owner.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

31. SOP: Process an access request

Defines a controlled workflow for requesting system access.

Step 1 — Confirm requester identity, business need, and requested role.

Step 2 — Obtain approval from the designated manager or system owner.

Step 3 — Route to the authorized provisioning team and verify completion.

Practical example
A manager approves the minimum role needed for an employee's current assignment.

Records and evidence
Keep request, business justification, approval, provisioning reference, and verification.

Never grant access based solely on an informal message without required approval.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

32. SOP: Process an access request: decision points and common issues

Additional guidance for applying this topic consistently, including checks, exceptions, and evidence.

Before you begin — Confirm the situation is within scope, identify the responsible owner, and consult the current approved source.

Decision point — Use documented facts and the relevant approval path; if unclear, pause and ask the designated owner rather than guessing.

Common issue — Missing context, outdated records, or unclear ownership can lead to inconsistent outcomes. Resolve these gaps before completion.

Practical example
In a review of sop: process an access request, the team finds inconsistent handling. The owner compares records with approved requirements, documents the gap, and assigns corrective action.

Records and evidence
Capture the decision rationale, supporting evidence, owner, date, and follow-up action related to sop: process an access request.

If this guidance conflicts with a current approved organizational document, follow the approved document and escalate the conflict to its owner.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

33. SOP: Review existing access

Explains how periodic access reviews are performed.

Step 1 — Obtain the current access listing from the approved system owner.

Step 2 — Compare access with role, assignment, and current business need.

Step 3 — Record retain, change, or remove decisions and track completion.

Practical example
A reviewer identifies an account belonging to a person who changed teams and requests adjustment.

Records and evidence
Keep review date, reviewer, decisions, exceptions, and remediation evidence.

Access reviews must be performed by authorized reviewers with appropriate independence.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

34. SOP: Review existing access: decision points and common issues

Additional guidance for applying this topic consistently, including checks, exceptions, and evidence.

Before you begin — Confirm the situation is within scope, identify the responsible owner, and consult the current approved source.

Decision point — Use documented facts and the relevant approval path; if unclear, pause and ask the designated owner rather than guessing.

Common issue — Missing context, outdated records, or unclear ownership can lead to inconsistent outcomes. Resolve these gaps before completion.

Practical example
In a review of sop: review existing access, the team finds inconsistent handling. The owner compares records with approved requirements, documents the gap, and assigns corrective action.

Records and evidence
Capture the decision rationale, supporting evidence, owner, date, and follow-up action related to sop: review existing access.

If this guidance conflicts with a current approved organizational document, follow the approved document and escalate the conflict to its owner.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

35. SOP: Offboard a departing worker

Describes the coordinated process for removing access and recovering assigned assets.

Step 1 — Receive an authorized departure notice and confirm the effective date.

Step 2 — Coordinate access removal with system owners and recover assigned equipment.

Step 3 — Record completion and escalate any access that remains active.

Practical example
The coordinator tracks each system owner's confirmation and follows up on an outstanding account.

Records and evidence
Keep departure reference, checklist, asset receipt, removal confirmations, and exceptions.

Follow approved HR, legal, and security instructions for the actual offboarding event.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

36. SOP: Offboard a departing worker: decision points and common issues

Additional guidance for applying this topic consistently, including checks, exceptions, and evidence.

Before you begin — Confirm the situation is within scope, identify the responsible owner, and consult the current approved source.

Decision point — Use documented facts and the relevant approval path; if unclear, pause and ask the designated owner rather than guessing.

Common issue — Missing context, outdated records, or unclear ownership can lead to inconsistent outcomes. Resolve these gaps before completion.

Practical example
In a review of sop: offboard a departing worker, the team finds inconsistent handling. The owner compares records with approved requirements, documents the gap, and assigns corrective action.

Records and evidence
Capture the decision rationale, supporting evidence, owner, date, and follow-up action related to sop: offboard a departing worker.

If this guidance conflicts with a current approved organizational document, follow the approved document and escalate the conflict to its owner.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

37. SOP: Manage a document revision

Defines the controlled process for updating an operational document.

Step 1 — Submit a change request describing the reason and affected sections.

Step 2 — Obtain subject-matter review and required approval.

Step 3 — Publish the new version, update the revision history, and retire obsolete copies.

Practical example
A process owner changes a step after a system update and obtains approval before publishing.

Records and evidence
Keep change request, reviewers, approval, version, effective date, and distribution record.

Do not silently replace a controlled document without recording the change.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

38. SOP: Manage a document revision: decision points and common issues

Additional guidance for applying this topic consistently, including checks, exceptions, and evidence.

Before you begin — Confirm the situation is within scope, identify the responsible owner, and consult the current approved source.

Decision point — Use documented facts and the relevant approval path; if unclear, pause and ask the designated owner rather than guessing.

Common issue — Missing context, outdated records, or unclear ownership can lead to inconsistent outcomes. Resolve these gaps before completion.

Practical example
In a review of sop: manage a document revision, the team finds inconsistent handling. The owner compares records with approved requirements, documents the gap, and assigns corrective action.

Records and evidence
Capture the decision rationale, supporting evidence, owner, date, and follow-up action related to sop: manage a document revision.

If this guidance conflicts with a current approved organizational document, follow the approved document and escalate the conflict to its owner.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

39. SOP: Conduct a daily queue review

Provides a routine review for new, aging, and blocked work.

Step 1 — Open the approved queue report and confirm the reporting date.

Step 2 — Identify unassigned, urgent, overdue, and blocked items.

Step 3 — Assign follow-up owners and record actions or escalations.

Practical example
The team lead finds an urgent unassigned request and allocates it to an authorized operator.

Records and evidence
Keep review date, queue snapshot, findings, action owners, and completion status.

Use consistent filters and time zones when comparing queue reports.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

40. SOP: Conduct a daily queue review: decision points and common issues

Additional guidance for applying this topic consistently, including checks, exceptions, and evidence.

Before you begin — Confirm the situation is within scope, identify the responsible owner, and consult the current approved source.

Decision point — Use documented facts and the relevant approval path; if unclear, pause and ask the designated owner rather than guessing.

Common issue — Missing context, outdated records, or unclear ownership can lead to inconsistent outcomes. Resolve these gaps before completion.

Practical example
In a review of sop: conduct a daily queue review, the team finds inconsistent handling. The owner compares records with approved requirements, documents the gap, and assigns corrective action.

Records and evidence
Capture the decision rationale, supporting evidence, owner, date, and follow-up action related to sop: conduct a daily queue review.

If this guidance conflicts with a current approved organizational document, follow the approved document and escalate the conflict to its owner.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

41. SOP: Conduct a weekly quality review

Explains how a team reviews samples of completed work.

Step 1 — Select a sample using the approved sampling approach.

Step 2 — Assess accuracy, completeness, communication, and procedure adherence.

Step 3 — Record themes and assign coaching or process improvements.

Practical example
A weekly sample reveals repeated missing closure notes, so the lead schedules targeted coaching.

Records and evidence
Keep sample criteria, records reviewed, findings, action owners, and follow-up results.

Protect customer and employee information in review notes and reports.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

42. SOP: Conduct a weekly quality review: decision points and common issues

Additional guidance for applying this topic consistently, including checks, exceptions, and evidence.

Before you begin — Confirm the situation is within scope, identify the responsible owner, and consult the current approved source.

Decision point — Use documented facts and the relevant approval path; if unclear, pause and ask the designated owner rather than guessing.

Common issue — Missing context, outdated records, or unclear ownership can lead to inconsistent outcomes. Resolve these gaps before completion.

Practical example
In a review of sop: conduct a weekly quality review, the team finds inconsistent handling. The owner compares records with approved requirements, documents the gap, and assigns corrective action.

Records and evidence
Capture the decision rationale, supporting evidence, owner, date, and follow-up action related to sop: conduct a weekly quality review.

If this guidance conflicts with a current approved organizational document, follow the approved document and escalate the conflict to its owner.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

43. SOP: Prepare a shift handover

Defines the minimum information required when transferring operational responsibility.

Step 1 — List open high-priority items, blockers, and deadlines.

Step 2 — Summarize recent actions, current status, and next required action.

Step 3 — Confirm the receiving person accepts ownership and knows escalation contacts.

Practical example
An outgoing operator briefs the next shift on an unresolved incident and confirms acceptance.

Records and evidence
Keep handover time, outgoing and incoming owners, open items, and acknowledgement.

Do not rely on verbal handover alone for critical tasks; record the information in the approved system.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

44. SOP: Prepare a shift handover: decision points and common issues

Additional guidance for applying this topic consistently, including checks, exceptions, and evidence.

Before you begin — Confirm the situation is within scope, identify the responsible owner, and consult the current approved source.

Decision point — Use documented facts and the relevant approval path; if unclear, pause and ask the designated owner rather than guessing.

Common issue — Missing context, outdated records, or unclear ownership can lead to inconsistent outcomes. Resolve these gaps before completion.

Practical example
In a review of sop: prepare a shift handover, the team finds inconsistent handling. The owner compares records with approved requirements, documents the gap, and assigns corrective action.

Records and evidence
Capture the decision rationale, supporting evidence, owner, date, and follow-up action related to sop: prepare a shift handover.

If this guidance conflicts with a current approved organizational document, follow the approved document and escalate the conflict to its owner.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

45. SOP: Respond to a service interruption

Provides an initial coordination sequence when a service becomes unavailable.

Step 1 — Confirm the symptom and affected scope using approved status information.

Step 2 — Notify the designated incident channel and follow the incident lead.

Step 3 — Provide verified updates and record recovery checks when directed.

Practical example
Several users report the same service failure; the operator records examples and notifies the incident channel.

Records and evidence
Keep start time, affected services, user reports, status updates, and recovery evidence.

Do not attempt unapproved infrastructure changes or claim service restoration without verification.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

46. SOP: Respond to a service interruption: decision points and common issues

Additional guidance for applying this topic consistently, including checks, exceptions, and evidence.

Before you begin — Confirm the situation is within scope, identify the responsible owner, and consult the current approved source.

Decision point — Use documented facts and the relevant approval path; if unclear, pause and ask the designated owner rather than guessing.

Common issue — Missing context, outdated records, or unclear ownership can lead to inconsistent outcomes. Resolve these gaps before completion.

Practical example
In a review of sop: respond to a service interruption, the team finds inconsistent handling. The owner compares records with approved requirements, documents the gap, and assigns corrective action.

Records and evidence
Capture the decision rationale, supporting evidence, owner, date, and follow-up action related to sop: respond to a service interruption.

If this guidance conflicts with a current approved organizational document, follow the approved document and escalate the conflict to its owner.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

47. SOP: Capture lessons after an incident

Describes how to document learning after an incident or major disruption.

Step 1 — Collect the timeline, impact, decisions, and recovery details.

Step 2 — Identify contributing factors without assigning blame prematurely.

Step 3 — Agree improvement actions, owners, due dates, and effectiveness checks.

Practical example
A review finds that an unclear handover delayed diagnosis and assigns an action to improve the checklist.

Records and evidence
Keep incident reference, review notes, action register, and closure evidence.

Share lessons constructively and restrict sensitive incident details appropriately.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

48. SOP: Capture lessons after an incident: decision points and common issues

Additional guidance for applying this topic consistently, including checks, exceptions, and evidence.

Before you begin — Confirm the situation is within scope, identify the responsible owner, and consult the current approved source.

Decision point — Use documented facts and the relevant approval path; if unclear, pause and ask the designated owner rather than guessing.

Common issue — Missing context, outdated records, or unclear ownership can lead to inconsistent outcomes. Resolve these gaps before completion.

Practical example
In a review of sop: capture lessons after an incident, the team finds inconsistent handling. The owner compares records with approved requirements, documents the gap, and assigns corrective action.

Records and evidence
Capture the decision rationale, supporting evidence, owner, date, and follow-up action related to sop: capture lessons after an incident.

If this guidance conflicts with a current approved organizational document, follow the approved document and escalate the conflict to its owner.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.

49. SOP: Request a process exception

Explains how to request a temporary deviation from a standard process.

Step 1 — Describe the requirement that cannot be met and the reason.

Step 2 — Assess risk and propose compensating controls with an owner and expiry.

Step 3 — Obtain approval before using the exception and track its closure.

Practical example
A team requests a temporary alternate review method and waits for approval before proceeding.

Records and evidence
Keep request, risk assessment, approver, conditions, expiry, and closure record.

An exception cannot waive applicable law, mandatory safety rules, or required incident reporting.

Document control: Sample Organization • Version 1.0 • Owner: Operations Enablement • Review cycle: Annual or when a material process change occurs.
